

## TOP COAT

Oshkosh Finishing Services delivers the complete range of manufacturing and finishing solutions to help you deliver the highest quality products to your customer. From Corrosion Protection and Top Coat to Welding, Fabrication and Assembly, our streamlined processes, unmatched capabilities and multi-industry experience help you receive premium products at the right price.

# TOP COAT | ADVANCED, CONSISTENT APPLICATION

Oshkosh Top Coat utilizes trained, experienced technicians and state-of-the-art equipment to deliver an advanced, high-quality service. Isolated booths are strictly regulated to deliver top coats with a consistent application of color and thickness on parts of all shapes and sizes.

Oshkosh prides itself on utilizing state-of-the-art coating technologies, offering the highest quality and cost-efficient application for a variety of products, including armor, steel, aluminum, iron alloys and galvanized materials. Our streamlined facility connects the top coat booths with the E-Coat systems, which reduces lead times, product handling and overall production costs.

## State-of-the-art coating system.

- Paint booths are linked directly with the E-Coat systems to minimize material handling and contamination, improve efficiency and reduce cost and time
- Comprehensive prep-stations provide masking and caulking capabilities to ensure an effective and consistent top coat
- Top coat paints are monitored and adjusted based on temperature and humidity to deliver a stable coating to the paint booths
- Coating technology offers a consistent application of color and thickness on parts of all shapes and sizes and a variety of products and substrates ranging from small brackets to entire vehicles
- Advanced painting systems include a wide assortment of color applications, pattern and camouflage painting, sand and non-slip painting, as well as chemical agent resistant coatings, commercial colors, urethane, acrylic and rustproofing technologies
- Forced air drying oven provides a more efficient and consistent drying process for all top coats, and allows parts to be handled and assembled in less time
- All top coat applications undergo a stringent product inspection process prior to delivery

FMTV Cargo 6x6

*"With the Oshkosh name, you know you are getting the highest quality products and service throughout the entire process. Our Operations department is constantly focused on continuous improvement initiatives to increase efficiencies on the FMTV manufacturing process. The end result has been truck and trailer components sent through E-Coat tanks and top coat booths on the same line under the same roof. This reduces lead times, product handling, and costs."*
