## Oshkosh Defense Statement on USPS NGDV Product Mix

*With the Oshkosh Defense NGDV, the USPS will be able to replace their fleet of 30+ year-old Long Life Vehicles (LLV) with a much more sustainable fleet of both zero-emission battery electric vehicles (BEV) and low-emission internal combustion engine vehicles (ICE), built on a common chassis. Oshkosh can produce any mix of BEV and ICE vehicles, up to 100% BEVs, that the USPS wants. The vehicles will include the modern safety and ergonomic features carriers deserve, such as a driver airbag, front and rear automatic braking, superior direct visibility, low step in heights, 360-degree camera system, air conditioning, adjustable mail trays and large door openings.*

*We are honored to have been selected by the USPS to support their important work by manufacturing American-made Next Generation Delivery Vehicles (NGDV). We look forward to the NGDV production beginning in 2023.*
