Oshkosh Defense Statement on USPS Record of Decision

The United States Postal Service (USPS) has issued its record of decision on the Final Environmental Impact Statement (Final EIS) for the Next Generation Delivery Vehicle (NGDV) program. We defer to USPS all questions and inquiries on the Final EIS. What we can tell you is that with the Oshkosh Defense NGDV, the USPS will be able to replace their fleet of 30+ year-old Long Life Vehicles (LLV) with a much more sustainable fleet of both zero-emission battery electric vehicles (BEV) and low-emission internal combustion engine vehicles (ICE), built on a common chassis. Under the NGDV Contract, Oshkosh can produce any mix of BEV and ICE vehicles, up to 100% BEVs, that the USPS wants. The vehicles will include the modern safety and ergonomic features carriers deserve, such as a driver airbag, front and rear automatic braking, superior direct visibility, low step in heights, 360-degree camera system, air conditioning, adjustable mail trays and large door openings. We look forward to the NGDV production beginning in 2023.
