## Oshkosh Defense Statement on March 18<sup>th</sup> Letter from Congress

*Oshkosh Corporation will support any Congressional requests regarding the NGDV program.*

*With the Oshkosh Defense NGDV, the USPS will be able to replace their fleet of 30+ year-old Long Life Vehicles (LLV) with a much more sustainable fleet of both zero-emission battery electric vehicles (BEV) and low-emission internal combustion engine vehicles (ICE), built on a common chassis. Under the NGDV contract, Oshkosh can produce any mix of BEV and ICE vehicles, up to 100% BEVs, that the USPS wants.*

*Oshkosh concluded that the Spartanburg, South Carolina location would best meet the needs of this important program. Hiring and facility preparations are well underway in Spartanburg, South Carolina to ensure Oshkosh will meet contractual deadlines for vehicle production to begin in 2023.*
