## Oshkosh Defense Statement on USPS Lawsuit

*We'll defer to the United States Postal Service (USPS) for inquiries on their Environmental Impact Statement and any related litigation. What I can tell you is that with the Oshkosh NGDV, the USPS will be able to replace their fleet of 30+ year-old Long Life Vehicles (LLV) with a much more sustainable fleet of both zero-emission battery electric vehicles (BEV) and low-emission internal combustion engine vehicles (ICE), built on a common chassis. Under the NGDV contract, Oshkosh can produce any mix of BEV and ICE vehicles, up to 100% BEVs, that the USPS wants. The NGDV contract provides the USPS with the flexibility to order a higher proportion of battery electric vehicles as funding becomes available. The vehicles will include the modern safety and ergonomic features carriers deserve, such as a driver airbag, front and rear automatic braking, superior direct visibility, low step in heights, 360-degree camera system, air conditioning, adjustable mail trays and large door openings.*
